The present invention provides the protein and coding sequences of a pea protein with nucleotide triphosphate decomposing activity. The gene can be used for conferring blight resistance on a plant. The present sequence is one version of the coding sequence of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              142
                                            The present invention provides the protein and coding sequences of a pea protein with nucleotide triphosphate decomposing activity. The gene can be used for conferring blight resistance on a plant. The present sequence is one version of the coding sequence of the invention
                                                                                                                                                                                                                                                                                      120

                                                                                    The present invention provides the protein and coding sequences of a pea protein with nucleotide triphosphate decomposing activity. The gene can be used for conferring blight resistance on a plant. The present sequence is one version of the coding sequence of the invention

                                                                                                                                                                                                                    à
                                                                                                                                                             The NBP46 root lectin is instrumental in recognising and binding to nitrogen fixing rhizobial bacteria via a lectin-carbohydrate interaction. The production of transgenic plants comprising an expression casette expressing the NBP46 root lectin is advantageous since it would mean that non-leguminous plants could fix nitrogen from the atmosphere, lessening the need for the addition of nitrogen containing fertilizer to soil. This would lead to higher crop yields where soil has been overplanted and replenishment of the depleted soil with usable nitrogen. Alternatively, expression of NBP46 can be used to modulate oligosaccharide signalling in the plant. The nucleic acid sequences can be used to inhibit expression of an endogenous gene and also to suppress endogenous NBP46 gene expression. This DBX sequence also isolated from D. biflorus is also involved in oligosaccharide signalling

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polymuclocides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polymucleotides in the plant cell plantacteristic of a stress response. The method is useful in the plant cell production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of a Arabidopsis thalians stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GlyLeuSerSerTyrAlaAspLysProGluLysAlaAlaGluSerLeuIleProLeuLeu 113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    114 GluGluAlaGluAspValValProGluGluLeuHisProLysThrProLeuLysLeuGly 133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            33

The invention relates to a novel isolated polynucleic acid segment modulated within a cell by posttranscriptional gene silencing (PTGS). The invention specifically relates to a method to identify an expression product that is modulated by PTGS. The polynuclectide is useful for modulating the gene expression within a cell by PTGS, by introducing the polynucleic acid into a cell and expressing the nucleic acid segment in the cell to form a product. The polynucleic acid segment is also useful for augmenting a cell genome, and for augmenting a plant genome, by contacting a plant cell with the segment to produce a transformed plant cell, and growing the transformed plant cell to produce a differentiated transformed plant. The segments session in ABZ421017 - ABZ42142 represent segments of A. thaliana cDNA modulated by PTGS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        210

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to element in the interaction or in the present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      t 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant

mRNA linear EST 24-APR-2002
Medicago truncatula cDNA clone
/note="Vector: Lambda Zap; Library was produced from fully expanded M. truncatula leaves of plants fed upon by spodoptera exigna (beet armyworm) for 24 hours. Systemic (undamaged leaves from injured plants) and wounded leaves were harvested and pooled."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Medicago truncatula (barrel medic)

/note="Vector: Lambda Zap; cDNA was prepared from polyA+enriched, pooled samples of equivalent amounts of total RNA from very young, developing, fully-opened flowers and flowers transitioning into pods. The cDNA was directionally ligated into the Uni-Zap XR vector (Stratagene) and packaged using the Gigapack III Gold packaging extracts. Phagemids containing cDNA inserts were in vivo excised from the recombinant Uni-Zap XR vector using ExAssist helper phage and the E. coli strain XLI-Blue MRF. (Stratagene). Excised plasmids were plated

      truncatula plants were transplanted to phosphate-free sand and grown for a further 30 days. During this 30 day period, the plants were fertilized twice weekly with 1/2 Hoadjands solution containing only 20uM potassium phosphate. RNA was prepared from above ground tissues."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                     1 MNWVWPKTKSMSFLLLITFL......GTAIEAISSLPKFNRLMYFI 462
